

CARE

Caring for a swimming pool that is equipped with a salt chlorine generator is made simpler by virtue of automation—the device makes chlorine for you.

But these devices do not test the water, clean your filter, adjust, balance or handle a weekend pool party, nor should they be considered maintenance-free.

Salt Solutions by Ultima® Pool Care products are designed specifically to treat and protect saltwater pools and are easy to use.

Salt Solutions by Ultima®

Weekly Salt Pool Refresh

Added weekly, this product replenishes salt levels, reduces pH, and helps maintain stabilizer. Additional ingredients help to prevent scale, protect equipment, clarify the water and make the water feel soft. For pools of any size and surface.

Salt Start Up

This multi-functional product is ideal for pool start up at the beginning of the pool season and may also be added during the season to help boost the stabilizer (cyanuric acid) levels in your pool. Stabilizer is needed to help protect generated chlorine from sunlight. Also clarifies pool water, controls metals and creates softer feeling water.

Monthly Salt Maintenance

Added monthly, this combination product contains an oxidizer that eliminates common pool water contaminants and a clarifier that clears cloudy water. This product also prevent deposits from forming on the generator's cell, corrosion of the electrodes and can also be used for winterizing.

Cell Extend

This monthly maintenance product contains powerful agents that prevent scale and oily buildup on the cells in your generator which can help extend the life of the cell. Additionally, this product clears cloudy water, increases the filter's efficiency, protects pool surface from staining and reduces phosphates in the pool water.

PowerWash Cell Cleaner

Used once per season, this product cleans your cell quickly and may help extend the life of the cell. A mixture of hydrochloric acid, surfactants and dispersants, it is highly effective at removing scale buildup and is easier to handle than muriatic acid.

Weekly Shock Oxidizer

Used weekly, this product eliminates organic contaminants like sunscreen and sweat without the use of chlorine. Use this product to help keep your water sparkling clear, fresh and odor-free. Best of all, you can swim 15 minutes after treatment!

Algaecide

Even pools equipped with salt chlorine generators can get algae. This product is a triple-action formula that quickly and effectively removes all types of pool algae. Can also be used as part of your weekly maintenance program to keep your water clear and free of algae.

Stabilizer

Salt chlorine generators create unstabilized chlorine. This kind of chlorine dissipates quickly when exposed to the sun's UV rays. This product extends the life of the chlorine in your pool. Cyanuric acid levels should be maintained between 30 - 50 ppm.

pH Down

Salt chlorine generators convert saltwater into chlorine using a process that often raises the pH of pool water. Adding this product as needed helps to protect your salt pool equipment and surfaces by lowering the pH into the recommended range of 7.2 - 7.8.

Salt Test Strips

Use weekly to test salt levels to ensure they are maintained at proper levels so your generator runs efficiently. Follow your salt chlorine generator manufacturer's recommendations for proper salt levels.

Product availability dependent on EPA and state registrations.

PRODUCT	FREQUENCY	BENEFITS
Weekly Salt Pool Refresh	Weekly	Replenishes salt, reduces pH, maintains stabilizer, prevents scale, clarifies & softens
Salt Start Up	At start-up & during season	Boosts CYA, clarifies and protects surface from staining
Monthly Salt Maintenance	Monthly	Eliminates contaminants, clarifies water & protects generator
Cell Extend	Monthly	Extends life of generator, protects pool equipment/surfaces & lowers phosphates
PowerWash Cell Cleaner	Once per season	Keeps cell running efficiently
Weekly Shock Oxidizer	Weekly	Eliminates contaminants & clarifies water
Algaecide	Weekly or after algae bloom	Prevents and controls algae
Stabilizer	As needed to maintain 30-50 ppm	Protects chlorine from harmful UV rays
pH Down	As needed to maintain 7.2-7.8	Protects surfaces and equipment and provides bather comfort
Salt Test Strips	Weekly	Maintaining proper salt level allows generator to run efficiently
